

Q8 Brake Fluid

Description

Automotive brake fluid

Application

- Hydraulic brake and clutch systems with natural or synthetic rubber seals of passenger cars, commercial vehicles, buses and trailers

Recommendations

- Q8 Brake Fluid may be used where a non-petroleum type fluid is required and which is described by the following performance quality specifications:

Specifications

- FMVSS 116 DOT 3
- FMVSS 116 DOT 4
- SAE J 1703 & 1704

Benefits

- Increased vehicle safety due to the high boiling point/low vapour pressure providing anti vapour lock characteristics
- Compatible with system rubber seals
- Limited wear due to good lubricity
- Quick brake response at high and low temperatures
- Stable fluid characteristics
- Provides system metal corrosion protection
- Miscible with other non-petroleum brake fluids
